

CASE STUDY Video-Verified Alarm System

PROBLEM

Local business was plagued with burglaries. The business spanned a large area, and the suspects were cutting the fence to gain access to the property, which was backed up to a wooded area. This provided cover for the suspects to gain access, and made it difficult for local police to patrol.

The business had tried a traditional alarm system, but got a poor response from local law enforcement, mostly due to several false alarms.

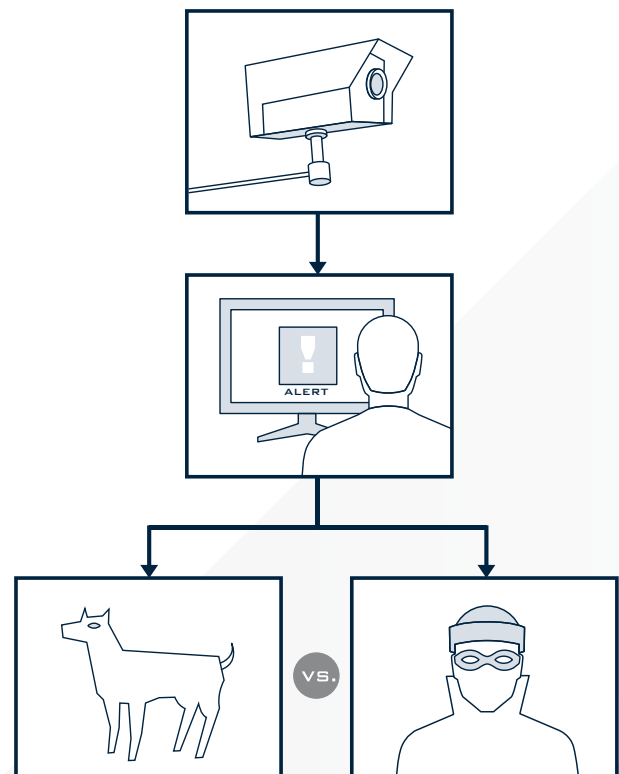

Since 97% of all alarms are false, the police have a slow reaction to them, and this can also mean hefty fines for responding.

SOLUTION

Titan Protection implemented a battery-powered and wireless video-verified alarm system on the property. Within four days of the system being active, we received a string of video clips. At midnight, we received a video of several deer in a nearby field, but the business owner and police were not bothered with the false alarm.

At 3:30 a.m., Titan Protection received a video clip of a male walking along the fence line with bolt cutters. The police were dispatched immediately. They responded with quality assets in the form of several patrol cars, and two K-9 units since they knew they were responding to an actual event. This resulted in two suspects going into custody, and several cases being cleared.

The system remains in place, and the business owner sleeps well at night knowing his property is protected.

ABOUT VIDEO-VERIFIED ALARM SYSTEMS

Since 97% of all alarms are false, the police have a slow reaction to them, and this can also mean hefty fines for responding. The Kansas City Missouri Police Department has estimated a 4- to 6-hour response time to traditional alarms, and a \$50 fine if it is false. There is a better way, and that's where we come in.

Video-verified alarms are just that: alarms verified with video. The technology has come a long way, making this a very affordable solution. Motion sensors and other devices are triggered and send alerts to us. We verify these events through video, and react accordingly.

STOP CRIME BEFORE IT STARTS.

Titan Protection & Consulting is owned and operated by police officers
ready to create a custom security solution tailored to your needs.
